## Patient's Chief Complaint:

Patient's mother is concerned that her stem may not be forming properly and may hinder her ability to function as she develops.

## Patient's History:

Patient's mother indicated that Mr. Farmer Joe likes to plant radish seedlings in pots with potting soil in order to promote healthy growth of his plants. However, according to the patient's mother, Farmer Joe went out of town for the Cottonville Farmer's Convention. In his absence, a large storm came through the farm and knocked over Rashida's pot and several others. Mr. Farmer Joe did not return until one month after the storm came through. The patient's mother reports that Rashida had developed a 90° bend on her primary stem. The patient's mother submitted a picture for the doctors to view. (See below.)

The patient's mother stated that she let her daughter lay down and sleep in a darkened portion of the barn for a couple of weeks to see if that would help correct the curvature of Rashida's main stem. There was no apparent change in Rashida's condition reported.

## Referrals/Tests/Treatments:

Physical examination shows no abnormality with patient's body other than the curvature of the main stem. All of the leaf structures appear to be in working order and are arranged parallel to the ground despite the 90° bend in the stem. The patient is receiving adequate levels of sunlight, food, water, and nutrients for her age range.

<b>Patient Name</b>	<b>Radish, Rashida</b>
<b>Date of Inquiry</b>	8/11/14
<b>Height (cm)</b>	5 .23
<b>Pressure</b>	1100 mB
<b>Age</b>	1
<b>Number of leaves (NoL)</b>	2 (cotyledons)
<b>Color Complexion (Cc)</b>	normal
