Employer Phone: <i>(555) 687-4344</i>		Referred By: <i>Dr. Vass Cular</i>		Today's Date: <i>8/11/14</i>	

Patient's Chief Complaint:

Patient indicated that he has anger management issues and low self-esteem.

Patient's History:

Patient stated that he is a small green plant that grows in a dense cluster in a shady area beside a pond with his family and friends. He has extensive family bonds. The patient is related to 24,000 other types of moss. The patient expressed concern about his simple body structure and the lack of true roots, stems, or leaves. He reported that a major source of stress is the caused by the inferiority that he feels due to the Redwood Tree that he lives near. The patient indicated that he wishes that he was strong and tall like the Redwood tree and sees no benefit to his existence.

Referrals/Tests/Treatments:

Physical examination shows no abnormality with patient's body. The patient stands at 2 centimeters from the ground - normal for moss. The patient is receiving adequate levels of sunlight, food, water, and nutrients. Research was gathered after the initial meeting with the patient to further understand and remedy the patient's condition. (See article from PlantMD).

Mosses affect the communities in which they live as they supply food and shelter for small animals and insects. They protect soil and keep slopes from washing away during rainstorms or severe weather. They also aid in forming new soil. Acid produced by the root like parts of the moss slowly soften the rock when they grow in shade over rocks. This acid breaks down into the soil and the dead moss parts will turn into humus then larger plants will have sufficient soil to grow.
