E

Electrical Energy
**Forms of Energy Foldable**

- **Chemical Energy**: Energy produced by eating food or by sugar made through photosynthesis in plants or found in chemicals and batteries.
- **Solar Energy**: Energy produced by the sun (original source of all energy).
- **Potential Mechanical Energy**: All energy in a moving object is mechanical. Mechanical is the MOTHER of two kids: Potential (couch POTato-stored energy) or Kinetic (kid who is energetic-moving energy).
- **Electrical Energy**: Energy that flows through an electric circuit. This produces other forms of energy (sound, light, ...).
